

THERMOSKIN SUPPORTS AND BRACES

**Alleviate Neoprene/
Elastic Irritation with
Trioxon® Lining**

The Trioxon® in Thermoskin works to help

CONTROL PERSPIRATION

▲ Small fibers work to lift moisture away from the skin.

▲ Air is trapped within the yarn.

▲ The knitting process holds air inside the pile.

This creates a micro-climate to help the skin breathe and gives **COMFORT FOR THE WEARER** for prolonged periods of time.

Thermoskin Therapeutic Supports

work in four ways:

▲ They increase the blood flow to damaged tissue and so speed up the healing process.

▲ They provide light compression to counter-act tissue swelling

▲ They allow your skin to ventilate and remain well oxygenated and therefore comfortable

▲ They reduce stiffness

Prevention

To help PREVENT soft tissue injury wear Thermoskin:

- ▲ prior to activity
- ▲ during activity
- ▲ after activity

Washing instructions

▲ Hand or machine wash in warm water using mild
